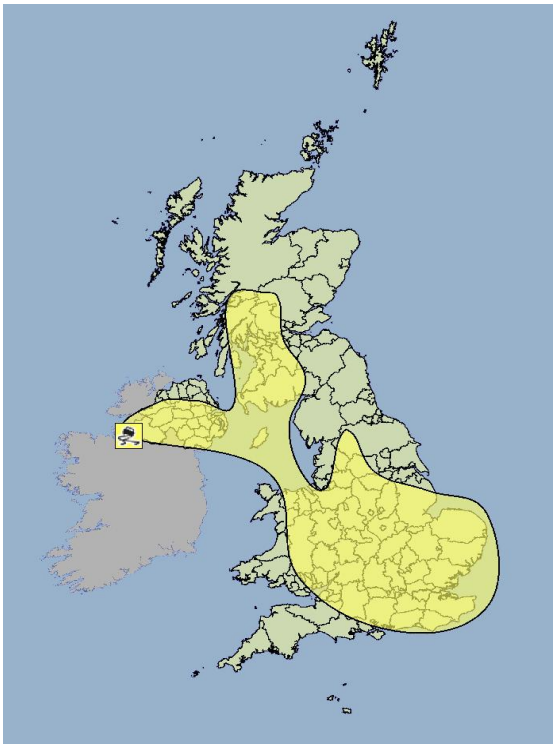
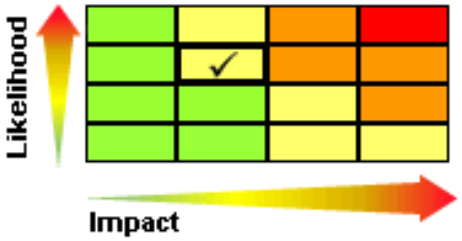
National Severe Weather Warning Service





Chief Forecasters Assessment
Rain sleet and snow will affect Northern Ireland and Wales this evening spreading to central and southeastern England during the night. Following this, skies will clear and ice is likely to form.

Snow will mainly be away from northern facing coasts and on high ground above 200 m where 2-5 cm may accumulate, mainly in northern areas. Some temporary snow is possible to low levels at times.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **18:00 on Wed, 31st Jan 2018** until **10:00 on Thu, 01st Feb 2018**

Following a spell of rain, sleet and snow, temperatures will fall quickly allowing ice to form on untreated surfaces. Further showers of rain, sleet and snow will follow in the west on Thursday morning, potentially diluting overnight treatments.

Some roads and railways are likely to be affected with longer journey times by road, bus and train services. Some injuries from slips and falls on icy surfaces are possible.
